Mosquito Control in Public Drainage Areas and Waterways

New Braunfels, Texas — Citizens who are concerned about a public drainage area or waterway providing the potential for mosquito breeding may contact the City of New Braunfels at 830-221-4030 between 7:00 am and 4:00pm Monday –Friday to report the location. The street address of the area of concern should be noted before the call. This information is also available by selecting the “I Want To...” menu on the City’s website at www.nbtexas.org.

“Areas of overgrown vegetation and stagnate water can be a breeding ground for mosquitoes,” said John Cox, Streets and Drainage Manager. “We invite citizens to notify us if a public drainage area or waterway needs attention to help minimize this possibility.”
